CATALOG 40

THE PHOENIX GLASS COMPANY
PITTSBURGH, PENNA.

DOWN thru the ages glass making has been considered one of the great arts. Individuality could be found in the shop of every craftsman whether in the making of delicate ornaments or pieces of a more commercial character.

This same spirit of individuality has been maintained in the making of PHOENIX-RADIANT

Fine in texture it possesses a deep lustrous beauty that is transformed when lighted into a snow-white light of even distribution. Glare is filtered out and the light is perfectly diffused with a minimum of absorption.

RADIANT GLASS is actually a laboratory product where, in its development, efficiency was matched against ability to diffuse light. Tests were made in the successive stages of its development and these tests determined the final product. PHOENIX-RADIANT is not a compromise but a combination of the highest efficiency possible with good diffusion.

The present widespread recognition of PHOENIX-RADIANT is justified.

Radiant Glass Decorated

A permanent brown color is applied on the smooth natural finish of the glass. The designs are beautifully proportioned and suitable for any installation requiring a decorative treatment.

Etched-Adam Toned

The embossed design is the result of an acid etching process. This design toned a soft shade of brown stands out in pleasing relief against the white mat background of the glass.
